Fan Clutches & Blades

Fitment Guide 2019

For 4x4 & Light Commercial Vehicles

Prevent Damage to Other Engine Components

A worn fan clutch prevents the engine cooling system from operating at optimum level. Vibration from a worn fan clutch may also be transmitted to other parts on the same belt system, leading to increased wear and premature failure.

Failed fan clutches may also place constant unnecessary load on the engine, reducing available power and increasing fuel consumption.

When a failed fan clutch does not engage cooling fans, under-bonnet heat can build up, reducing the efficiency of the vehicle air conditioning system which must work harder to maintain cabin temperature.

High quality Adair fan clutches are manufactured to meet O.E. specifications.

High Quality Aftermarket Fan Blades

Adair fan blades are manufactured to original equipment specifications and are a direct-fit replacement, designed to resist cracking and warping in the extreme heat of engine bays. Adair fan blades are made from the highest grade Polypropylene (PP) or Polyamide (PA) to match the vehicle manufacturer's material specification. Blade profiles are also the same as the factory design to match cooling performance and noise levels.

Fan Blades
